AUDIO

## Bronze Series

Bronze series Home Theatre packages are ideal for people looking for a quick fix to the newly found home theatre addiction that seems to have taken the average family by force. It comes in two different packages; both packages consist of a quality receiver by multi-award winning company Cambridge Audio. In the V1 package, the Cambridge Audio receiver is accompanied with five Sonance CR101 6.5" speakers. In the V2 package the Cambridge Audio receiver is accompanied with 5 HomeTech 6.5" speakers.

### The Cambridge Audio 540R

The 540R offers a powerful 80W delivery across each of its six channels (or 100W in stereo two channel), while there is a full array of connections. Not only is the 540R's on-board CS493263 multi-channel DAC capable of decoding Dolby Digital Surround 6.1 EX and DTS ES 6.1, but the receiver also processes Dolby Digital and DTS 5.1, as well as Dolby Pro-Logic and the new Pro-Logic II.

### Sonance CR101 In-ceiling Speakers

The CR101's provide maximum performance for affordable cost in a round speaker format with a 6.5" polypropylene woofer. Matched with a fixed 1/2" cloth dome tweeter, the CR101 resists dampness and weather, has broad smooth dispersion and is easily-driven by any amp or receiver. The speaker's also come with aluminium grilles.

### HomeTech HT603R In-ceiling Speakers

The HomeTech range of speakers is also made by Sonance. The HT603R's have a very similar spec to the CR101's but can handle a little more power, meaning you can listen to you DVD just that bit louder without the speakers distorting. It also has a pivoting tweeter allowing the sound to be directed straight at you.
