

# ILLUMINATE AUDIO

## Paradigm and Cambridge Audio “in-a-box” DIY Theatre Packs

These are Paradigm’s most affordable complete and compact speaker systems to date and feature the company’s award-winning Monitor Series technology (the company’s affordable high-end line of speakers). With the Cinema™ CT line, Paradigm delivers real audiophile quality sound – at really modest prices. Each CT package comes with Cambridge Audio’s award winning DVD89 DVD player and award winning 540R home theatre receiver, plus 7 custom made RCA cables for component video and digital audio from your DVD player to your receiver and component video from your receiver to you TV.

### Cambridge Audio 540R

The 540R offers a powerful 80W delivery across each of its six channels (or 100W in stereo two channel), while there is a full array of connections. Not only is the

540R’s on-board CS493263 multi-channel DAC capable of decoding Dolby Digital Surround 6.1 EX and DTS ES 6.1, but the receiver also processes Dolby Digital and DTS 5.1, as well as Dolby Pro-Logic and the new Pro-Logic II.

### Cambridge Audio DVD89 DVD Player

The DVD89 takes Cambridge Audio's DVD players to the highest level, embracing HDMI (high-definition multimedia interface). The DVD89 decodes Dolby Digital soundtracks via the six channel analogue out and supports DVD-Audio. This technology

totally changes the way the listener experiences music. DVD-Audio discs have a much greater bandwidth and contain more accurate 24-bit audio (CDs only contain 16-bit audio), plus they can carry 5.1 surround sound as well as two channel audio. This radically improves the listening experience. In addition, the DVD89 is, of course, capable of playing conventional compact discs. This state-of-the-art technology makes the DVD89 the player to beat.

## Paradigm Cinema CT Packages

Paradigm's line of 5.1 Compact Theatre systems – Cinema 70 CT, Cinema 90 CT and Cinema 110 CT – are their most affordable complete and compact speaker systems to date and feature technology derived from their Monitor Series.

Paradigm gives three different CT systems to choose from. Studio apartment dwellers and gamers will appreciate the high-end sound the Cinema 70 system provides with four Cinema 70 satellites and the Cinema CC centre channel and a compact subwoofer.

The next system the Cinema 90 CT – two slightly larger Cinema 90 satellites for the front and a Cinema CC centre channel flanked by ADP speakers and a compact subwoofer. Cinema ADPs add reverberant surround sound for a realistic music and multi-channel soundstage.

Finally, the Cinema 110 CT uses three larger speakers to optimize timbral accuracy across the front of home theatres. The company's ADP surround speakers are part of this package. All models have three finishes to choose from – silver, white or black.

Also, the new compact Cinema CT v.3 subwoofers offer great output, control and clean bass. The subs also feature built-in

discrete amplifiers that provide high-current, low-distortion power.

With a compact profile, Cinema CTs are designed to fit into most living spaces and blend with most décors. They're lightweight for easy manoeuvrability and installation.

## **Cinema CT Model Introduction Breakdown**

### **Cinema 70 CT System**

- 4 x Cinema 70 – 3.5" bass/midrange driver, 1" high-frequency driver
- 1 x Cinema CC – 2 x 3.5" bass/midrange driver, 1" high-frequency driver
